

# Hooper Feeds “Flex-Fit” Crop Stabilizer Program

Production of high quality forages has always had its challenges. As the crop stabilizer industry has evolved, a variety of products have become available that have helped farmers overcome those challenges. Options abound with items to use to ensure good crop preservation, but not all options may be the right thing for the situation. For almost 10 years, Hooper Feeds has been offering a spring booking program on our various crop stabilizers. It has become apparent in the last few years that making a decision about a crop stabilizer in the spring may not be the best thing to do. Because of this, Hooper Feeds has decided to provide the “Flex-Fit” crop stabilizer early order program. This program is designed to allow you to take advantage of making a spring commitment but not to feel boxed in to a wrong decision. PLUS you still get a 15% discount off the normal price!

### Here’s How it Works:

1. **Decide** on the number of acres of hay and corn, either corn silage or high moisture grain, that you will be looking to treat with a crop stabilizer.
2. **Calculate** the anticipated yield of each crop.
3. **Report** the anticipated yield (in tons) to your Hooper Feeds representative. He will use that information to fill out a commitment form. That form will then be kept on file in our office and you will receive a copy.
4. As harvest time approaches, **discuss** crop stabilizer options with your Hooper Feeds representative. He will guide you as to the best options given the current conditions.
5. **Order** product in a timely manner so that we can deliver the product by the time you need it.

Type of Crop	Recommended Stabilizers
 <b>Hay Crop Silages</b>	HK 165 (Dry) PSI165® WS Storage Mate (Dry/Wet)
 <b>Corn Silage</b>	Harvest Keeper (Dry) PSI® Buchneri (Dry) Chopper’s Choice WS Chopper’s Choice Buchneri WS Storage Mate (Dry/Wet)
 <b>High Moisture Corn</b>	PSI® Buchneri (Dry) Chopper’s Choice WS Chopper’s Choice Buchneri WS Harvest Keeper (Dry) Storage Mate (Dry/Wet)
